

Facilitator: William Hugo

Participants: Ali Alladin, Magnus Andersson, William Hugo, Elias Johansson, Pelle Evensen

Date: 2020-09-18

Mentor meeting

§1 Objectives

- Our questions
- We show our current domain model
- We show our current runnable application and code
- Pelle informs about schedule changes

§2 Discussion Items

1. If we have a user story about interactivity of a listing card, (i.e click a card of interest for more information) should the view of that card be displayed in the domain model?
2. How is our participation judged? By code in analytics? If so, do we need to delegate our tasks?
3. Is testing using logs a good design choice for testing i.e. view methods?
4. How should we handle communication with our database? Observers?
5. Is our domain model looking better?

§3 Outcomes

1. Listing adapter should not be in the domain model.
 2. Not by amount of code or commits.
 3. Don't test views. Don't test getters or setters. For listing check equals
 4. Observers sound like a good way to communicate with the database.
 5. -
-
- - Code-tips: Declare types to the most general possible. List > ArrayList.
 - If at the end of the day nothing is testable, something is wrong.
 -

§4 End of Meeting

Next mentor meeting will be 2020-09-25 16.15
